

Convicts aiding the Blind

The Volunteers of Vacaville, who assemble the Beep Baseball, have a long history of service to the visually handicapped. This non-profit group of inmates of the California Medical Facility have served the visually handicapped since 1960 in tape recording textbooks and other materials, braille repair and other services. A brochure describing the organization is available from the address on the back page.

Although they are located in a state prison, the Volunteers of Vacaville receive no funds from the state and rely entirely on public donations to continue their work.

History of Beep Baseball...

Beep Baseball began with a request from a school for the blind in Colorado Springs, Colorado for a ball that the students could find when playing among the trees. Charlie Fairbanks, a Mountain Bell Telephone employee with electronics experience, designed the first audio softball in 1964. Another telephone company employee, Vernon Greese, also contributed to the design of the ball in respect to durability, weight, and balance.

A service organization of active and retired telephone employees are the original sponsors of Beep Baseball for the sightless. The organization, the Telephone Pioneers of America, displayed the Beep Baseball at their 1969 Assembly. The result was the adoption of Beep Ball activity by many Pioneer chapters.

The idea for using the audio ball in a competitive game was Ralph Yock's, a Pacific Telephone employee and also a Telephone Pioneer. In 1971, Yock created the game for all ages and both sexes. With safety in

HISTORY (continued). . .

mind, Rock modified the normal rules of Baseball slightly to eliminate the possibility of two players colliding. But, at the same time, he retained as many of the regular ways of playing baseball as possible so that the flavor and excitement of America's national sport can be shared by the sightless.

Rock put together rules (see the following pages), designed a new baseball diamond, wrote safety regulations, and put together protective gear such as face and chest protectors.

The first game of Pioneer "Beep Baseball for the Sightless" was played in San Francisco's Golden Gate Park in April 1972. Since then teams have been organized throughout the country and in foreign nations. In November, 1975, the first national confrontation was held, appropriately enough, in Golden Gate Park between the East and West, when a team from Minneapolis-St. Paul won over a team from San Francisco.

The game grew so rapidly that by 1974 Rock, by then Commissioner of Beep Baseball, needed a reliable source of Beep Baseballs. He and Lou Marracci, President of the Ladd Chapter of Telephone Pioneers, approached the Volunteers of Vacaville about the possibility of the Volunteers assembling the balls. He had heard of this group of prison inmates and their long service to the visually handicapped, who were one of the largest producers of recorded material for the visually handicapped and other services.

The Volunteers agreed, and by October 1974 they had begun production of the balls and the bases for the game.

Since then they have produced thousands of the balls, and Rock was pleasantly surprised at the results. Over a dozen major design changes were made by the Volunteers until an almost indestructible ball was produced. The Volunteers have made possible the game at a fraction of the cost it would have otherwise have been.

Ralph Rock has said of the group, "Deep Baseball and sports for the visually handicapped have come a long way. The Deep Baseball Volunteers are the heart of the program in fact. Without them there would be no program. Through their volunteerism they have greatly increased the quality of the ball without increasing the production cost. We are all very proud of them."

The George H. Ladd Chapter of the Volunteer Pioneers were so interested with the work of the Volunteers that they presented them with the first Deep Baseball award; it was presented at the First Annual East-West Game of Deep Baseball.

The Volunteers have gone into other areas of sports equipment for the visually handicapped, including surf balls and Deep Bowling. Deep Bowling was the invention of the first Deep Baseball Production Supervisor, Frank Krueger.

The ball, and the game, have come a long way since it started, thanks in large part to the Volunteers.

rules of the game...

The Rules in Brief

The signed pitcher is the Chad Upcore calling "innings" and "outs". He also pitches the "long ball" to the players as fast. The batter listens for the "home base" sound of the ball and swings at the sound. He has five strikes in the ball before he is out. Four strikes are the rule. A signed catcher waves up down the players in and from the bench and also to remove the pitcher.

When the batter hits the ball, the signed Game Committee announces the sound (a continuous "bushy" or any kind of the ball sound) (batter must respond with speakers). When he knows that sound, the batter starts for that base.

Having the ball, the Outfield will know the ball is in play. A righted Player (usually) will see the Outfield's position around the ball, and he then knows it is around. If the Fielder finds the ball before the batter reaches the base, the batter is out. If the batter reaches the base before the Fielder finds the ball, the batter scores a run.

If the Fielder catches a ball on the fly, the side is automatically retired.

Beeping Ball Baseball Field

- 3 0 out of the field (out of play)
- 1 1 out of play
 - 2 2 out of play
 - 3 3 out of play
 - 4 4 out of play
 - 5 5 out of play
 - 6 6 out of play
 - 7 7 out of play
 - 8 8 out of play
 - 9 9 out of play
